CLASS:Jss2A

TOPIC:If i could invent something new

If i had an opportunity to invent something new,it will be something that will benefit people in my environment and around the world it will be cars used on land,water and can also fly.In the ancient times we had only horses which were for the rich and the poor walk on foot but then came cars which became a means of transportation for both old and young.Till today car is the most commonly used means of transportation and conveying of goods from one place to another.The increase of cars on the road have resulted to road conjection and increase in accident,frankly that is the reason why i would want to invent cars that can be used in water,land and air.

Firstly my invention will help reduce problems caused by traffic conjection,it will also reduces lateness to work and goods will be taken to their destination on time.people love adventure and want to try new things it will help to curb the issues of accidents on the road.with the invention,people will not have issues with traffic rules and regulations.The issues of being to reduce since they can use any of the means of transportation.It will also reduce cost of transportation because the government will want the three frms of transportation accessable to both rich and poor to get to their destination.

Secondly,with the invention individuals will not need to book flights and tickets to travel oversees for business,They would rather prefer the invented cars, those that need to travel by water will use the water car without waiting for a ship to arrive.It will also help to reduce the presence of traffic wardens,law enforcements and theft in our high ways.It going to be very interesting and fun.people will find it fun to travel from one place to another and other countries will want to purchase or buy these cars to also make life easy for them which will help to improve the economy of the country.

Thirdly, Obviously people have only watched these cars in movies and have not seen it in reality,so it will be a welcome idea for them to experience the first hand comfort. The company and stakeholders will make it affordable and flexible payments will be introduced for people who can't afford it,citizens can now go home early from work and spend quality time with the family compared to when there was only cars on the road which resulted to traffic accident and lateness to work and back from work.It also help to reduce stress and improve the mental health of the populance.

In conclusion the inventment will reduce the construction of roads which is very expensive to constructs. This Innovation will help reduce prblems for the country ,For example my local government surulere which is mostly populated and road are narrow most cars can not go throw convinently.So this is why i want to invent cars.
