IF I COULD INVENT SOMETHING NEW

It hurts me to know the number of innocent citizens dying, everyday we need water as a means of survival, but why is it that water is the thing causing death to many people of our existing generation. Most people throw their waste such as spoilt food, paper, plastic, rags and glass that can be dangerous to humanity. I know that most of the people using river, ocean and lake are those in rural areas, but we must help them in the aspect of water contamination. Water contamination occurs when pollutants pollute water sources and make it the water unfit for use either in drinking, cooking or even in cleaning. Do you know how many people die due to water contamination; I am deeply sorry for them.

Due to this I have invented a machine called TFCB which means The Fast-Cleaning Bot. This is a very effective machine that works under water, and it uses wastes as energy. This bot is to be put in the ocean or river, then it will scan its surroundings and clear all the solid wastes and turn them into its own chemical energy. After that the bot will use an acid called chlorine to purify the water. Then the bot will study the movement of the water and after that, any strange movement in the water would be detected and the bot would quickly go to the area where the strange movement is being detected, and the bot would clear the waste immediately before it spreads.

This machine is very good and fast in maintaining and cleaning its surroundings. It even comes out of the water to check the surface of the earth peradventure, if there is anything can enter the water, then the bot will clean it completely. I am recommending this bot to all rural areas, because it would make water healthier for use and fit for our immune system. This machine should be used by all water producing and purifying organizations because it reduces stress, and it would make water purification easier. This bot should be put in place in all rivers and ocean, instead of we humans going into the river to remove the waste in it. Doing this we would save innocent lives from drowning in the rivers and oceans while trying to clear the waste.

Lastly, this bot would guarantee the whole world a better place free of germs, bacteria and anything that can hinder a sound health. So, let's live a life of cleanliness and let's make the whole world a better place with the use of the FCB which means The Fast-Cleaning Bot.
