If I Could Invent Something New

If I had a chance to invent something new which would be very beneficial for mankind it would be a flying car. As we all know “Necessity is the creation need of all inventions”, earlier people use to go by cycle, horses, camels and by foot. After car was invented it changed everything radically. People started using cars more than any other vehicle. Nowadays, cars are the most common means of transportation. The number of traffic jam has increase with the use of a great number of cars. Basically, that’s why I would like to invent a flying car. I have number of reasons in support of my invention.

Firstly, my invention would help to decrease driver’s stress cause by traffic jams. As statistics shows that traffic jams are increasing in big cities as well as small ones. Cars play an important role in everybody’s day to day activities. Such as going to work doing groceries etc. Even with public transit available in major cities people use their personal cars to travel. This results to a lot of cars on the road at the same time. Especially during business hours when everyone is trying to go to their work place people encounter massive traffic jams unexpectedly. Some people would prefer to drive flying cars instead of ordinary cars. The combination of ordinary and flying cars definitely would help to get rid of traffic jams.

Secondly, in the result of this invention there could be decrease of car accidents. Sometimes people don’t realize that they violate the laws and break the traffic rules because of a lot of reasons. They violate the laws because they are in a hurry, they are trying to overcome different traffic problems like road construction, narrow streets, crowds of people etc.

It will also increase productivity and efficiency in everybody’s life. People would be able to spend quality time each day. In my opinion, it will also give people more time to spend time with their families and enhance the quality of life of many people and flying car service should also be available.

Finally, it would be a lot of fun driving in the sky than on the road. Isn’t that exciting?. It will be a joyful ride for everyone. We’ve often met the concept of flying cars in science fiction or Hollywood films. Obviously it is interesting and people would want to fly it themselves.

In conclusion, I would like to change this stressful atmosphere. Actually, people waste time in traffic jams instead of them spending more time with their family or friends. I would also spread a word of caution to the users of my flying car. They need to be careful while driving this latest

piece of technology and respect everyone's air space as not doing so could cause fatal accidents in the air.

This invention would be very beneficial for people to avoid stress and enjoy travelling. As it will be made more faster than the ordinary cars.
