

NAME: SAMUEL ADEWALE

SCHOOL NAME: REDEEMERS INTERNATIONAL SCHOOL

CLASS: JSS1

### **IF I COULD INVENT SOMETHING NEW**

Think about a future where you can find yourself wherever you want and whenever you wish. A situation where you don't have to work so hard to gather huge sums of money only to be used as transport fare. A situation where you don't have to stay long hours trying to get to one desired destination from another.

This imagination has become the prime mover of my desire to create a teleporter.

Teleportation in science fiction which is different from quantum physics involves the instant movement of a person or objects from one location to another through a process of disassembling and reassembling particles. Although it hasn't been achieved.

Teleportation experiments have been conducted in labs and proves feasible within the constraints of quantum mechanics although sealing it up to humans and large objects remains a technological challenge due to its complexity.

While the creation of a teleporter seems to be a fantastical concept, research continues to provide fascinating insight into the possibilities and limitations that may be existing as teleporting living things belongs to the field of science fiction.

With the facts above, inventing a teleporter does not seem possible with our current technology especially in Nigeria.

As a way to try because of my desire to invent one in order to relief myself and others from the stress of working so hard to get transport fare and going through harsh processes most times just to be able to move from one place to another, I would try inventing a teleporter by first using special effects, visual tricks and storytelling techniques and technologies to simulate my idea of teleporting.

Right now, because I understand that inventing a teleporter would require me to have a wide understanding of physics, engineering and technology that goes way beyond what is currently possible.
