

## **IF I COULD INVENT SOMETHING NEW**

If I had a chance to invent something which would be beneficial to mankind; it would be a panacea that cure life- threatening diseases [like HIV/AIDS, Cancer, Kidney failure] or cardiac illnesses. Currently, these cardiac illnesses increase the rate of mortality around the world, both developed and underdeveloped countries. Panacea is one thing people have wanted since time immemorial. With a panacea, people will no longer need complex prescription from doctors, allowing us to live longer, create more experiences and ultimately improve the quality of life.

Also, If I could invent anything, it would be a scanner that identifies what's wrong in a baby. When a child cries uncontrollably and the parents does not know what is wrong, even the doctors are confused, the scanner will help to detect what Is wrong in the baby.

Moreover, if I could invent anything, it would be a device that pick up litter and make the air cleaner and less polluted. The idea is inspired by the global issue that we face within keeping the Earth and having responsibility for it. Our intensive littering has caused our oceans and seas to be heavily polluted; littering is gradually and brutally slaughtering our sea life. Our sea life extinction has by 20% in the last 10years which suggest the possibility of not having oceans in the near future.

This machine therefore assists in cleaning and purifying damages that has been done so we can therefore make a sustainable environment for the next generation to come. It is independently run by battery or solar power to prevent the use of fossil fuels and harmful chemicals. The new technology can retail at a low price meaning that it is easy to buy and beneficial for local and world-wide communities.it is made with substantial materials to promote its sturdiness. With the help of this appliance, we can: multiply the growth of trees, plants and greenery, reduce the utilization of cars and other methods of transport and increase the use of recycling. Scientists have proven that we have approximately 10-12years to change our Earth. We must make our air cleaner and our Earth greener: We can make the difference!!!

Lastly, If I could invent anything that would help the world, it would be a solar-charged jacket for rainy days. It is like an overall jacket for different sizes of people and it will be charged by solar or sun energy. It also covers the face. It aids in keeping the body warm and also helps in the prevention of cold. It contains a rainy bag that can be worn during rain. For example, when a child wants to go to school and it is raining, the child can put his books inside the rainy bag and puts on the solar-charged jacket, then he can go to school without he

or his books been damped. If the battery is low, the oxygen will be inactive. I wish my discoveries could be supported.

Thanks.
