**JSS 3**

**IF I COULD INVENT SOMETHING NEW**

If I could invent something new, I will an aerodynamic robot which could satisfy all human want both on air and land and which will also be helpful and friendly to people. Imagine a world where robot flies and also walk on land doing household works repairing of products, building, tent making, warfighting, and caring for sick people ensuring planes don't crash and if they are about to crash they are caught before it lands reducing the accident of both road and air transport and making both road and air safe from danger and also protection of lives and properties it will also help in developing ,underdeveloped countries to live to the standards of developed countries . Imagine a crime free world where before the crime is done they are arrested reducing crimes and persecuting of criminals according to the effect of their crime. A place where safety is ensured to the people. A better place where robot go for shopping for you making it more easy for humans. The world would not have any more inflation because with them all expensive goods will drop to affordable goods. There will also not be need for farming also because all farmers will be robot and all machines will easily be arranged and operated by them[robot] This will also be a robot that also likes cleanse if you are dirty you can be sentenced to jail for six months. It will also minimize chloroforocarbon in the air

**MATERIALS USED TO MAKE AN AERO DYNAMIC ROBOT**

I will need carbon fiber, reinforced plastic, wires, lecular, basal, wood, polystyrene, alumimium and coding

**CHALLENGES I MIGHT FACE IN MAKING**

**AN AERO DYNAMIC ROBOT**

Without adequate structuring and complete equipment, the aerodynamic robot cannot be made without proper wiring the robot can malfunction which can lead to expulsion of the robot and other valuable things in it also requiring another equipment. It will also

have problem of coding once the code is wrong the robot can act otherwise which is not part of the plan also when it malfunctions you can easily reset it depending on the type of problem once reset it will also act the proper way. It will help people in the diaspora which will help poor people who don't have food and help them to feed daily on a balance diet without paying. It will find the cure of any diseases depending on the type of effect it will be able to cure cancer, HIV/AIDS and any other diseases depending on the robot capability

Imagine a world where you can learn karate, taekwando, and other martial art from home without stress. A place where you can get money without going to the bank because the robot will bring the automated teller machine [ATM] to the front of your house .it will show you the kind of economy you will run either good or bad.
