### **IF I COULD INVENT SOMETHING NEW**

In today's hectic world, in which life has trials and tribulations, people around the globe are looking for a better life. People have different points of view regarding the trends of modern life. In fact, the plethora of people try hard to enjoy their lives.

Bearing this fact in mind, a question that becomes a matter of debate, a conventional one is: What new invention can be helpful in the world? Agreement is yet to be reached on this situation.

However, I am of the belief that one of the most significant inventions in which people need in their life could have been the robot, with the following reasons:

The most outstanding reason, a compelling one at that is that nowadays vast majorities of people in all corners of the world hardly progress due to obstacles. Scientifically speaking, many people have to devote their time in various parts of their life in order to make progress or be successful. For example, mothers have to work hard along with teaching their children, even how to cook. Not only will parents run into a huge problem but also will possess their deficiency in order to complete their work in due time.

Diving further into the issue reveals that invention and development of robots not only can assist parents in their daily lives but also can reduce their stress by myriads of works. In other words, invention of robots not only will prevent parents from hiring assistant, these assistants definitely do not have the effectiveness that robots have. A noteworthy review on social research conducted in a country shows that people have serious problems in which they can attend to other works simultaneously which leads into a stressful lifestyle. Indeed, robots will provide a fertile ground for people to lead a healthy lifestyle and solve many problems.

Another reason that is equally important if not more important is that not only can robots work in a house but also can replace workers in an organization. Broadly speaking, we all know that robots are intelligent and meticulous in their work. In fact, not only can they enhance the quality of products but also can save the hoard for money, can cause significance progress in industry. To put it, invention of robots can revolutionize people and can bring many advantages to the whole life in a different dimension.

However, the points highlighted above cannot be generalized to all contexts. Alongside with the innumerable benefits robots have, invention of robots can cause serious drawbacks such as sedentary lifestyle and the likes. Hence, the need to exercise caution.
