IF I COULD INVENT SOMETHING NEW

I will be so glad and full with joy if I become an inventor in this world. I would be very grateful to the Almighty God for the good knowledge, wisdom and idea given to me to invent something so special for the whole world to use and that would be a diving boat.

It requires knowledge. Why I say that it requires knowledge is that I must go back to the past to think of what people invented in the past, use their ideas and add to my own knowledge to manufacture and produce what have not been created ever since the creation of the world.

So, inventors such as Graham Bell who invented the telephone, Charles Babbage, who invented the computer, German inventor, Johannes Guttenberg who invented the printing press, Guglielmo Marconi, who invented radio and Philo-Taylor Fransworth, an American who invented the television. It would be a thing of joy to be heard that an Akwa Ibomite invented a diving boat.

I would invent a diving boat so as to save lives and properties. I heard the sad news last month about the death of an actor and other crew members who were traveling to Anambra for a movie shoot but it happened that all of them died in a boat accident, their goods vanished in the water. If I had invented a diving boat since, it would have been used to save their lives and their properties.

If a diving boat existed, as soon as the sad incident occurred, a diving boat would have been used to save them, none of them would have died inside the water.

The following are the reasons why I invented:

- It will save lives and properties
- The cost of transportation will be at a very low rate
- It will also help to decrease driver stress caused by traffic jams
- It will encourage more people to travel by water especially those that determined for a very long that they would travel by means of water, but for fear of losing of souls they discouraged themselves from traveling by water.
- More goods and services will be exported and imported at an affordable price because of the low rate of transportation.
- It will be one of the fastest means of transportation ever.
- It would not be difficult to maintain and it would not easily cause accident because when one boat is coming on one lane, another boat has a sign that whenever it leaves for driving, there will be a signal. The co-driver will notice that one of his colleagues is on that lane, so he will kindly divert into another lane so that accident will not occur.
