### **IF I COULD INVENT SOMETHING NEW**

If I had the chance to invent something new a very beneficial for mankind, it will be a flying car. In the past people traveled on horse or just on foot. After car was invented, it changed everything radically. People started to use cars more than any other vehicle for transportation. The number of traffic jams has increased with the use of a great number of cars.

Basically, that is the reason why I would like to invent a flying car. Firstly, my invention will help to decrease drivers' stress caused by traffic jams. As statistics show, traffic jams are increasing in big cities as well as small ones. Especially during business hours when everyone is in a hurry trying to get to their workplace and unexpectedly encounter massive traffic jam. Some people will prefer to drive flying cars.

If I were to be a scientist, I would have also invented an equipment by which we can detect the shortcomings of any events which can be hazardous for our environment. Search equipment which can tell beforehand that certain events can be dangerous for environment and by that, we stop it in order to prevent further damage to the atmosphere. By this invention, the entire humanity will be benefited.

Nowadays more people are using automobiles and chemical factories flares affect the human brain and ozone layer. Deforestation has also added to the problem. There are serious attacks from all the sides on the nature. Our successors will be more and more natural calamities. Global warming has created threats not only for some endangered species but for all the living beings. There are temperature variations in all the seasons in every part of the world. For example, there are lots of islands being formed out of glaciers as result of global warming. This problem needs effective solution. I wish I can invent something new.
