Class: J S S 3

School: Al-Minhal Global Academy, Ile – Ife, Osun State, Nigeria

IF I COULD INVENT SOMETHING NEW

Invention is the act and art of creating something and to be more specific, something new. If I could invent something, I would invent a special type of clothing which I would call "THE ULTRA CLOTHES." Of course the clothes will not be ordinary; it would be cloth that would have a huge impact on the entire world. This cloth would look like any other clothes but more advanced and would perform additional specific actions that no cloth has ever performed. First of all, the shirt (of the clothes) which should preferably be a blackjacket, would be able to regulate the human body temperature during the cold and hot weather, it will warm up the body to the exact accurate temperature the body needs. The jacket would have specially imputed sensors that understand the climate condition and keep the body in a concise and normal temperature. This device would also be water resistant; in addition, the clothes would also be comfortable and easy to wear.

Also the trousers would have the ability for anti-sizing which allows it to automatically fit to the person wearing it. They will also be able to endure harsh weather conditions, Furthermore, the shoes, will have the capacity to endure better, it will also be more durable than normal shoes and thus enable the possessor to move at a faster pace. These shoes will also have self-cleaning input with ventilators which will prevent irritating and disgusting odours that emanate from shoes as a result of heat and moisture, the last thing about the shoes is that the user will be able to increase and decrease the speed of the shoe by knowing the amounts of steps taken per wearing. It would also be able to float on a considerable distance above ground level also move on air.

Then, the super glasses. This glass will be sleek and fashionable, it would be able to see a whopping 360⁰ field area around the user and would be able to zoom into magnify tiny structures and so much more like finding locations, tracking devices and so on. Lastly, the wrist watch, this would be like the Central Processing Unit (C.P.U of the entire asset including the jacket, trousers, shoes and glasses would all be connected to the wristwatch and will be the control key. The additional function of the wristwatch include having a small slot opening which shoot small spherical but very active tracking ball or chip which is where the use of glasses to see tracked devices comes in.

The wristwatch would also be able to transform to other electronic gadgets from mini-phones to the latest ones. it would be able to connect to almost anything that operates with electricity

In conclusion, all I have mentioned would be technology related and help man in varying situations.
