**SCHOOL:** ALL WEATHER INTERNATIONAL SCHOOL, EKET,  
AKWA IBOM STATE

## **“IF I COULD INVENT SOMETHING NEW”**

The beginning of an invention begins with always dreaming about it and personally I have many dreams.

Generally speaking, if I could invent something new, it would be something that would make an impact in our society. I would invent a car when directly uses water as its fuel (let's call it a water car) instead of fossil fuel such as gasoline or natural gas.

First of all, cars play an important role in our everyday life. Cars have become the essential piece of our day-to-day conveyance. Going to work or just transporting from one place to another are examples of how we use this kind of transportation.

Secondly, the increase in the use of cars has resulted in the increase in Air Pollution. This in turn leads to the increase of respiratory diseases as well as the loss of healthy ecosystem. In this manner, a “water car” would be a precursor of this important trend. I strongly believe that “water cars” would be an important innovation difficult to resist. This is because water is cheaper than fossil fuels. Just imagine how cheap it will be to travel from one place to another.

I strongly believe that “water cars” would be an important innovation difficult to resist, this is due to the fact that water is deeply cheaper than fossil fuels. Just imagine how cheap it will be

Another invention I would love to bring to life is something I call “Thought Realizer”. With a thought Realizer, we would have the ability to detect brain signals and bring imaginations to reality.

With Thought Realizer, people could bring to reality their ideas and dreams without the need for physical labour or resources. Artists for instance; could create masterpieces with just their thoughts and musicians could compose symphonies in split seconds.

The device will have the potential to revolutionize industries such as healthcare, education and sustainability. Thought Realizer would enable people to overcome physical limitation and disabilities thereby allowing everyone to reach their full potentials. Medical professionals could create personalized treatments and cures with just a thought, teachers could create immersive and interactive lesson plans, and scientists could develop innovative solutions to combat climate change.

Moreover, Thought Realizer would enable people to overcome physical limitation and disabilities, allowing everyone to fully impress themselves and reach their full potential.

The Thought Realizer would be a wearable device like a bracelet or headset with no implants that uses advanced brain computer interface technology to read and interpret brain signals. It would also be equipped with AI Algorithms that learn and adapt to the user's thoughts and preferences allowing for precise and accurate manifestation of their ideas. This device would require strict ethical guidelines to prevent misuse.

In summary, I strongly believe that the invention of a "water car" will lead to the reduction in market products cost while the "Thought Realizer" could be a tool that turns imaginations into reality that will transform the world.

I am UtibeIma-Abasi Victor Akpe from All Weather International Schools, Eket.
