IF I COULD INVENT SOMETHING NEW

Many students and people at large have been having these challenges and difficulties in erasing and editing the mistakes they have made in writing with pen. The pen ink has a very fast drying agent which makes it hard to erase.

When I finished emphasizing on this problem, if I could invent an AI erasing pen, the pen is going to operate just the same way you hold the normal pen but the operation differs in the sense that your thumb finger should be placed at the bottom of the pen at which laser pointed light comes out from the top of the pen and then it makes the ink soluble and then clean the mistake like a vacuum cleaner at the top of the pen. It will also be a recycling bin where inks would be stored so in case you run out of ink you can refill it.

As an AI machine, the pen will also have a special charging point at the mouth or peg to keep the pen strong in order to have good operation. The three things that will make the pen special that you can watch movie with it since it has a mini projector so when you say the name of the movie and put "Play" at the last sentence the movie automatically projects from the projector.

You can also copy your music, videos and file into the inbuilt memory and it can also be charged with electricity or solar.

The benefits of the AI pen are highlighted below

As an AI powered pen, it is affordable and transportable

It has a renewable source of energy

It has a lasting power of about 6800mAh

It has the ability to have a phone contact with people just like mobile phones

No ink will be loosed as they can be retrieved

It is highly technical

It is not too hard to operate

Even as the AI powered pen has benefits, he following must be done to use the pen appropriately

- The battery must be charged before operation takes place
- You must install ink pipes well before refilling

- You are not to continue using if the battery percentage reader signals red dim light.
- Do not use any other type of cord to power the pen as the company provides the suitable one that officially comes with the in the pack.
- Always dust it immediately after use
- Do not leave it on if not being supervised by any adult
- Ensure to follow the listed precautions above to increase its durability.

In conclusion, I think this issue that has been going on in almost every school when teachers are marking students' notes and there are a lot of errors, would be tackled with the AI pen.
