

NAME: NANCY CHIMAMANDA ONWE

SCHOOL: KASSIE BRAUN MEMORIAL SCHOOLS

CLASS: JSS 1

### IF I COULD INVENT SOMETHING NEW

Coming back from my class meeting, I felt so tired and exhausted. I finally remembered that I got a letter from the school principal and decided to open it after my siesta. When I woke up, I found out that my younger sister mistakenly mistook my letter for dirt (something that littered the environment). She picked it up and tore it into pieces, at that point in time; there was nothing I could do because the damage had already been done. If I could invent something new or had an opportunity, I would invent an AI machine that can automatically reverse torn papers back to its original form.

The AI machine would have a very high mental thinking that makes it to reverse a paper that was torn. The accuracy of the AI machine would be increased x2 of the way a human's accuracy is. The AI machine would be taken to places like schools, business centers, companies in case the clerk is clumsy and tears an important piece of paper or in a situation when rain wets a student's paper and tears it, the AI machine would be there to look at the paper, scans it and make another one. It will actually save more time than a human being writing another one. The AI machine would not be limited to just only one task but would be programmed to do other tasks to ease our everyday living.

It can be able to calculate at a higher level. The AI machine will be named PRAM; meaning Paper Reverse Automatic Machine. Its name is derived from the task it is required to function. The AI machine should not be tampered with because it may malfunction and carry out an entirely different program that is contrary to the original command. It should also not be forced to perform a task that it is not programmed for because it can destroy the system.

PRAM will be a helpful machine in the society and will help humans to correct their mistakes. Thank you!
