

NAME: CHIBUGO DESTINY CHIMEREMEZE

SCHOOL: KASSIE BRAUN MEMORIAL SCHOOLS

CLASS: JSS 2

### IF I COULD INVENT SOMETHING NEW

I have been thinking on what would make the society a better place, what can solve problems in the society and the world at large, then I thought of the challenges in the world and most especially my country, Nigeria. Nigeria has some challenges but the one that disturbs vehicle owners and people using generators is the high price of fuel and diesel. If I could invent something new, I would invent a machine that doesn't use fuel or diesel. This invention would be an AI machine that uses water to perform all its duties and activities.

My water powered car can help Nigerians and the world at large to reduce the consumption of fuel and some other natural resources. The water powered car uses only water, therefore, people would no longer buy fuel, rather spend little or no amount of money in buying water.

The water powered car is risk free. Sometimes, the reason why cars get burnt easily is because of the fuel in it but with the help of the water, there is a possibility that the car will be safe and reliable. There are some challenges that occur with petrol powered car such as running down of petrol on the way which will delay your journey but the use of this upcoming invention, you can go to nearby distilled water tap and fill the car tank with water.

Also, the smell of fuel makes people sick during journeys. This water powered car will make people have comfortable travel experience.

The car will not only have the water feature but also, it will have other features that make the car efficient. The car uses Bluetooth connection which helps the owner to know what fault it has at that point in time and correct it immediately. The car will also have a feature of voice recognition which helps to keep it secure from thieves.

Making the water powered car would be a difficult task. It would need innovation, creativity and science. Therefore, I would study day and night in order to make the invention better and help Nigeria and the world at large.
