

NAME: OKO COMFORT CHISOM

SCHOOL: KASSIE BRAUN MEMORIAL SCHOOLS

CLASS: JSS 2

### IF I COULD INVENT SOMETHING NEW

As a child, I have always thought of inventing something new and beneficial. I could remember back in the days when I would make a kite only wishing that it would go higher but results were always discouraging and horrible.

Just few days ago, I heard about a plane that boarded about 853 passengers and have not landed for about two weeks now. I have tried to discover the mystery evolving around this situation but it is still very confusing, then I began to ask myself whether the plane disappeared or it melted in the air.

Yesterday, I also heard about a ship that was launched a month ago with thousands of passengers aboard and there was no trace of this ship, how did it vanish? After so many researches and according to my hypothesis, I decided to conclude that there is a probability that it was vulnerable to the Bermuda triangle. The Bermuda triangle also known as the devil's triangle is believed to be a place of no return. Legends said that hell is located beneath the triangle while some said that the Garden of Eden is located there with proofs that when God banished the first two humans that existed he said that no man would ever set his eyes on the garden. Some sources said that people who enter the triangle replicate in the next world but according to my perspective, all these legends seem to be mythical and abstract. The most ambiguous thing about the Bermuda triangle is that it has a force of attraction just as the gravitational force and has a massive way of dragging any object that it within or closer to its area. Some scientist tried to picture the Bermuda triangle by attaching a camera on an eagle and sending it to the Bermuda triangle but unfortunately, the eagle vanished and the camera signal was lost. Since then no story has been heard about the eagle.

That drove to the idea of inventing something new and if I could invent something new, I would invent a device that has the ability to secure the area of the Bermuda triangle and also have a camera that has a telescope lens that can zoom the inner part of the Bermuda triangle. It would be able to withstand the gravitational force of the triangle and also cross the location where it is found.

This invention would be very beneficial as it would give learners and scientists the opportunity to study more about this natural phenomenon and gradually discover the mystery of the triangle. This device would also help to secure travellers from the force of the Bermuda triangle therefore preventing the loss of lives and valuables. To achieve my mission I would make extensive efforts in other to make this device a reality. It would be called Bermuda resistor.
