

NAME: JASON JAH

CLASS: JSS3

SCHOOL: BAPTIST MODEL ACADEMY, GUYUK, ADAMAWA STATE

### **IF I COULD INVENT SOMETHING NEW**

If I could invent anything, I would invent a machine that can automatically pick up litter and make the air cleaner and less polluted. This idea is inspired by the global issue that we face within keeping the Earth and having responsibility for it. Our generations are currently battling global warming which is predominately killing animals and species that are living in extreme climates of snow and ice. Our intensive littering has caused our oceans and seas to be heavily polluted; littering is gradually and brutally slaughtering our sea life. Our sea life extinction has risen by 20% in the last 10 years which suggests the possibility of not having oceans in the near future. This machine therefore assists in cleaning and purifying the damage that has been done so we can therefore make a sustainable environment for the next generation to come. It is independently run by battery or solar power to prevent the use of fossil fuels and harmful chemicals. The new technology can retail at a low price meaning that it is easy to buy and beneficial for local and world-wide communities. It is made with substantial materials to promote its sturdiness. With the help of this appliance, we can: multiply the growth of trees, plants and greenery, reduce the utilization of cars and other methods of transport and increase the use of recycling. Scientists have proven that we have approximately 10-12 years to change our Earth. We must make our air cleaner and our Earth greener: we can make a DIFFERENCE!
