**TOPIC: IF I COULD INVENT SOMETHING NEW.**

An invention is a mechanical or electrical device a person creates for the benefit or the good of people in a particular place or a country. An inventor is a person who creates an invention. An inventor can also be a person that comes up with new ideas for the benefit and the welfare of people in a society, place or country.

If I had the opportunity to invent something I would love to invent an electric glove and goggles that would help to make people play basketball in a much easier and comfortable way. And I would also like to invent a machine that makes transportation easier in the form of a sneakers. It would be called "**GG ELECTRO SNEAKS**" this comes with a leg wear just like gloves, this shoe helps people that cannot walk to be able to walk and run.

Here are some procedures in using "**GG ELECTRO SNEAKS**", you first of all you push a small red button on the edge of the sneakers this helps power it on, then you wear the leg sleeves and also push a red button this help the sleeves and sneakers connect to each other.

The next step is to check the left side of the sneakers and select the type whether you want it to walk or to run, charge it immediately it tells you battery low or it becomes a bit much slower. The "**GG ELECTRO SNEAKS**" helps our society in so many ways like to those helpless people who don't have the privilege to walk and also to those who don't have legs to walk and are using crutches to walk and that is their only source of transportation.

This gives a wonder to so many minds how would people without legs be able to wear shoes and in the same manner be able to walk without crutches that's easy the sneaker comes in many forms like long ones and short ones the ones that people that do not have legs use is the long one which is like socks but the under is a bit harder.

One of the many questions that comes to one's mind is that if this machine is to make life easier how would the poor and the less privilege get it is simple these sneakers would be distributed to the orphanage homes and would be sold at a very comfortable price for those who don't have that much to pay for the shoes, they would be allowed to pay with the money that they have or they can afford.

I hope that this invention would be able to make a difference in so many people's lives, and make the society a much easier place to live in and also a place where people can live their live freely and live their normal life.
