

NAME: ODUWOLE AYOTOMIWA ENOCH

SCHOOL: APOSTOLIC FAITH SECONDARY SCHOOL IBADAN

CLASS: JSS1

TOPIC: IF I COULD INVENT SOMETHING NEW

The beginning of an invention begins always dreaming about it, and personally I have many dreams. If I could invent something new, it would be something that would make an impact in our society and also it would be a revolutionary invention that would transform the way we travel. I would invent a car which uses directly water as its fuel, let's call it "Water Car" instead of fossil fuels such as gasoline or natural gas.

The Water Car would use advanced electrolysis technology to split water molecules into hydrogen and oxygen, which would then be used to power the vehicle. This process would be clean, efficient and sustainable, producing only water vapor and heat as exhaust.

First of all, cars play an important role in our everyday life. Cars have become the essential piece of our day-to-day conveyance. Going to work, doing groceries or just transporting from one place to another are examples of how we use this kind of transportation. In the place where I live, public transportation is a bad choice to travel from one place to another, therefore the use of automobiles as a personal way to transport are very used. I say we depend on this kind of transportation because we depend on it for its comfort and its privacy.

Secondly, in addition cars play an important role in our everyday life, the increase use of cars has resulted in the increase of air pollution. This consequently results in the increase of respiratory deceases as well as the loss of healthy ecosystems. The importance of air pollution is high throughout the world and people try to find a way to reduce this hazard, by inventing "Water Car" it would significantly reduce greenhouse gas emissions, helping to combat climate change and air pollution.

Lastly, beyond the importance of cars in our everyday life and also the fact that the increase use of cars has resulted in the increase of air pollution, I strongly believe that "Water Car" would be an important innovation difficult to resist, this due to the fact that water is cheaper than fossil fuels. The Water Car would also have practical advantages. It would be quieter and smoother than traditional cars, providing a more comfortable and driving experience. It would also require less maintenance, as it would have fewer moving parts and no oil changes would be needed for it. Water cars may be more expensive, but it will be an important investment for our life, just imagine how cheap it would be to travel from one place to another using this kind of transportation.

To sum up, I strongly believe this invention will be a turning point in the way we see transportation, and would be a groundbreaking invention that would transform the way we travel, this would bring a lot of benefits for our society and reduce our impact on the environment.
