**TOPIC: IF I COULD INVENT SOMETHING NEW**

If I had a chance to invent something new which would be very beneficial for mankind it would be a flying car. In the past people traveled only on a horse or just on foot. After car was invented, it changed everything radically. People started to use cars more than any other vehicle. Nowadays, cars are the most common means of transportation. The number of traffic jams has increased with the use of a great number of cars. Basically, that is why I would like to Invent a flying car.

Firstly, my invention would help to decrease driver's stress caused by traffic jams are Increasing in big cities as well as small ones. Especially, during business hours when everyone is in a hurry trying to get to their work place and Unexpectedly encounter massive traffic jam. Some people would prefer to drive flying cars definitely would help to get rid of traffic jams.

Secondly, in the result of this invention there could be decrease of car accidents. Sometimes people don't realize they violate the laws and break the traffic rules because of a lot of reasons. They are trying to overcome different traffic problems like road constructions, narrow streets, crowds of people, etc. In my opinion there is only one solutions to these problems. Flying car service should also be made available. we have often met the concept of flying cars in science fiction or Hollywood films. Obviously it is interesting and people would want to try it themselves. I would like to change the stressful atmosphere. Actually, people waste time in traffic jams instead of that they can spend more time with their family or friends. This invention would be very beneficial for people to avoid stress and enjoy it travelling. People would also like to use flying cars because they are so much easier and faster besides, I suppose it will be cheaper to serve flying machine because you do not need to change tyres, repair suspension and other attendant details. We would have to serve citizen that it would have more powerful motors or helical blades, owners will care about these parts of "mini helicopter". Probably the fuel will be a little more expensive. Nevertheless, this machine has a lot of advantages thus, this new car will help for some business to minimize time waste more also, it will help minimize government expenditure on road repairs.

If I am given the opportunity to work on this project such car will soon exist. I wish it could land very easy on regular parking space for automobiles. It has to be small in size to prevent problem like parking.
