**SCHOOL: URHOBO COLLEGE EFFURUN**

**IF I COULD INVENT SOMETHING  
NEW**

If I were to invent something new it would be a multi-purpose vehicle

The reason I say so is because transportation is a major problem all over the world. Transportation is a major problem which stops people from getting jobs. Even people with jobs would already be given a warning for lateness due to bad or busy roads.

Even to get through the road from place to place, people need to pay a fare. To get across a river or body of water on a boat is also quite expensive. People who travel by air need to pay hundreds of thousands of naira.

A multi-purpose vehicle would be even cheaper than your average car, boat or even an airplane. The fact that it combines three modes of transportation makes traversing the open world easier.

Being convertible makes you able to shift from one mode to another. It is also a time saving machine. Imagine this, the time it takes for you to enter a car, stopping at the airport and then waiting in a long line to get a ticket will all be a thing of the past with this vehicle.

People who have this vehicle would no longer be affected by busy roads, cleaning and maintenance will be easier and cheaper. Buying this vehicle will make the problem of

transportation disappear from the country because traveling from place to place will be easier and less stressful.

It also decreases the rate of accidents in narrow streets. Roads undergoing construction could easily be flown over. In the case of a flooding you can just switch to float or hover mode and it's done. Journalists and tourists would have it easy while taking pictures because they'd be able to fly above the location for aerial photos in the best possible angles.

People who wanted the feeling of using a car like a boat, it's here for you. When people watch movies which involve vehicles like these, their curiosity rises. People's curiosity would go down on the imagination of how using a multi-purpose vehicle would be.

It would also be fun to fly around like an airplane, drive like a car or float like a boat.

With all the problems of transportation out of the way, the government can be able to focus on other issues of the country, making it easier to do so. It has a fuel tank which holds fuel for each of its modes. The only disadvantage is the price of fuel, otherwise with this, transportation would not be too much of a hassle.

In conclusion would like to change the stressful atmosphere. Instead of people waste time in traffic jams, they would get to spend that extra time doing more productive things.

This invention would be beneficial for people to avoid stress and travel with friends together.
