TITLE: IF I COULD INVENT SOMETHING NEW.

If I could invent something new, it would be something that will make an impact in our society, I would invent a car which uses water as its fuel, let call it water car. Instead of fossil fuels such as gasoline or natural gas. I explain below some arguments to defend this stance.

First of all, cars play an important role in our everyday life. Cars have become the essential piece to our day to day conveyance, going to work, doing groceries or just transporting from one place to another an example of how we use this kind of transportation. In the place where I live, public transportation is a bad choice to travel from one place to other, therefore the use of automobiles as a personal way of transport are very used. I dare to say we depend on its comfort and its privacy.

Secondly car play an importance role in our everyday life, the increase use of cars has resulted in the increase of air pollution. This consequently results on the increase of respiratory disease as well as the lost of healthy ecosystems. The importance of air pollution is high throughout the world and people try to find a way to reduce this. In this manner a “water car” would be a precursor of this important trend.

Lastly, beyond the importance of the cars in our everyday life and also the fact that the increase use of cars have resulted in the increase of air pollution, strongly believe that “water cars” would be an importance innovation difficult to resist, this due to the fact that water is deeply cheaper than fossil fuel are in a beginning water cars may be more expensive, but it will be an important investment for our life, just image how cheap it will to travel from one place to another using this kind of transportation.

To sum up, I strongly believe this invention will be a turning point in the way we see transportation, this will bring with itself a lot of benefits for our society such as the reduction in market products cost and the encourage of touristic places (this due to it will be cheaper to travel from one place to another).

I would like to change this stressful atmosphere. Actually, people waste time in filling station instead of that they can spend more time with their families or friends. This invention would be very beneficial for people to avoid stress and enjoy travelling.
