IF I COULD INVENT SOMETHING NEW

I would want to invent something new that no one has ever invented. My invention would express my feeling and the productivity of it.

Then I've been thinking, how will I make the world a better place? How will I impact the society? A day came, I sat down in front of my corridor, I thought of building a car that works on its own but it has already been invented, an air conditioner has already been invented and my question still remains what would I invent?

A Generator that uses gas, diesel, fuel and kerosene have already been brought to existence. What should I invent still remains the question.

But it will likely be better if I invent something new that will help my future career. I would want to become a well popular, famous and known doctor.

A thought came to my head, on behalf of people in the hospital that are suffering from different kinds of diseases, is it not better for me to invent a standing machine for running a test? This is because most of the time when patients have severe diseases just like HIV and AIDS. Some doctors have to start making a HIV test for him or her, which might take a little time. If this patient disease is so serious it might lead to death or loss of life, it has already been brought to existence, but it could be upgraded by making it an automatic machine that runs faster and easier and it could be sensed in a way that when you say on it will on automatically, it will function through the voice recognition of the nurse in charge of it, I would like it to be inform of a scale for measuring weight, that when you stand on it will automatically tell you the diseases and what is wrong with him or her. If I was given a slight opportunity to name this device, I will call it a Test-running machine. The advantages includes: It save lives, it works faster and easier, it saves time and it reduce stress. The disadvantages include: when the inventors do not make the correct connection of wires it might have malfunction, It could also be expensive.

The importance of the Test-running machine is that it will reduce the lost of lives and it will help to develop the society.

In conclusion, I really hope this knowledge of mine will impact the society in many ways. I also wish to impact this part of my knowledge to the inventors so that they can bring it to existence. Thank you!
