CLASS: JSS 2

IF I COULD INVENT SOMETHING NEW

I was stressed up after the classes we had on Friday, I decided to rest my head in my bedroom and then I turned on the air conditional to feel more comfortable.

It got to a particular point in time around 2:23pm, the AC was no more comfortable for me and I was shivering. I found it difficult to stand up to switch the AC off because of the cold, I was almost freezing. God helped me that day that my dad came to check on me and discovered what happened and that was how I was able to resist and recover back to life. If not for my dad, I may have frozen like an ice block.

After this experience, I thought to myself that if I could invent something new, I will invent an AI air conditional remote controller that can be able to detect the maximum number of temperature that is require for a room and at what degree it should be able to sustain the people inside the room. People can switch off the AC or even reduce it while in bed.

I think that should be a very good idea and a way to save people's lives as many people lose their lives due to unawareness or due to their dangers involve in living an air conditional on for long period of time when it has already circulated the entire room.
