TOPIC: IF I COULD INVENT SOMETHING NEW

NAME: MANASSEH IKETUBOSIN

NAME OF SCHOOL: WISDOM CHILD INTERNATIONAL SCHOOLS, PORT-HARCOURT

CLASS: JSS 2C

**TOPIC: IF I COULD INVENT SOMETHING NEW**

If I could invent something new, I would create a special machine called "Kitchen Chopper." My mother works in the kitchen every day to prepare meals. Sometimes, she is tired after cooking that she can't even help me with my homework. That is why I want to invent something that can make her life easier and give us more time together.

The Kitchen Chopper would be a smart kitchen robot that can do many things. First, it would have different arms with special tools attached, like knives for cutting vegetables and spoons for stirring soups. You just need to put the ingredients on the table, and the robot will know what to do. It can peel yams, slice onions, and even pound fufu.

My invention would also have a big screen on its chest where you can see recipes from all over Nigeria and even other countries. You can choose what you want to cook, and the Kitchen Chopper will tell you what ingredients you need. If you do not have something, it can suggest a different recipe or tell you what to use instead.

The best part of my invention is that it can cook multiple dishes at the same time. Imagine making jollof rice, vegetable soup, and fried plantain all at once. The Kitchen Chopper would have different compartments where it can cook different things without mixing up the flavour. This way, you can cook variety of meals without spending hours in the kitchen.

Another feature of my invention would be its ability to clean up after cooking. It would have a built-in sink where it can wash the dishes and put them away. This means no more fighting with my siblings about whose turn it is to do the dishes.

I think the Kitchen Chopper would be very useful for many families in Nigeria. It would help working parents who don't have much time to cook after a long day at work. It could also help students like me who want to learn how to cook but are afraid of using sharp knives or hot stoves.

I would make it affordable so that many people can buy it. It will be used in school cafeterias to make lunch for all the students.

In conclusion, if I could invent something new, the Kitchen Chopper would be my choice. It would make cooking easier, faster, and more fun for everyone. Plus, it would give families more time to spend together, eat healthy meals, and enjoy each other's company. Who knows, maybe one day I'll become an engineer and actually create this amazing kitchen robot.
