SCHOOL: TETO SCHOOLS, IBEJU-LEKKI, LAGOS

CLASS: JSS 2

### **If I could invent something new**

If I had the chance to invent something new which would be very beneficial to mankind, it would be a **FOOD GENERATOR**.

Food waste and hunger are two of the world's most pressing issues as research would indicate. Therefore, I would invent a food generator - a device that would produce nutritious and delicious food with the touch of a button.

First of all, my invention would provide healthy food whenever needed. This convenience would be especially beneficial for busy people, families and communities with limited access to healthy food options.

Secondly, my invention will help to reduce climate change and promote sustainable living. It would contribute to reducing the environmental impact of food packaging and processing on humans.

In addition, my food generator would produce nutritious food tailored to individual health needs thereby promoting healthy eating habits and reducing the risk of acquiring any chronic disease. It would also provide food for people with specific dietary requirement.

Hence, my invention would be a valuable tool for the healthcare industry. It would enable doctors and various health practitioners to provide nutritious and healthy plans for their patients.

This invention of mine would have economic benefits as well. These economic benefits would include: reducing food waste and the need for industrial farming and transportation before food is made available on our tables. It would save us millions and billions of naira annually. This device will also create job opportunities in maintenance, manufacturing, and developmental research.

My invention will change the way we think about food production and consumption. It would not only provide convenience and promote positive health outcomes but, would also encourage economic growth.

In conclusion, my invention would have the ability to change the world, making food obtainable and sustainable for all. With this food generator, we would create and re-mould

a brighter and healthier future for generations to come where food is served with the click of just buttons.
