CLASS: JSS3

### **IF I COULD INVENT SOMETHING NEW**

As a matter of concern, children deserve a safe and peaceful environment where they can thrive without fears. So, considering the essay topic ‘If I could invent something new,’ I then thought of inventing a device that can detect when a child is in danger, and possibly sends an alert or notification to the child’s guardians for rescue. This great invention I dream of will help save the lives of fellow children like me.

I realize that today’s world, despite advancement in technology; we still lack a reliable and efficient way to ensure the safety of children. As a result of that, I have dedicated myself to creating a device that can detect when a child is in danger, alerting parents and authorities on time. Bullying is common among children; research has it that between ages of 8 and 13 has experienced bully at some point. Students who reported being bullied stated that it has negative impacts on them. Many children are bullied by peers who are bigger or stronger than they are. Also, cases of children being kidnapped, abused, raped etc, are pressing issues in the society and should be abolish, because it affects and endanger the lives of both adult and children.

The device would be a wearable, non-invasive and user-friendly tool that utilizes cutting edge technologies like AI, GPS, and Biometrics. It would continuously monitor the child’s surrounding, vital signs and emotional state, detecting potential threats and alerting caregivers through a mobile app. The device would have an advanced sensor to detect changes in the child’s environment example sound, temperature or hazardous materials. It would also track the child’s location, ensuring that they remain in a safe zone.

The impact of this device would be profound, it would save lives, prevent abductions, child trafficking, child abuse and molestation and so on. It would also empower children, giving them the confidence to explore their surroundings without fears.

In conclusion, my dream of inventing this device that can detect when a child is in danger is driven by a passion for child safety and a desire to harness technology for greater good. I believe that together we can create a safer and more compassionate world where children can live and associate peacefully. Therefore, this would be a dream come true for me and of great relevant to the lives of great leaders of tomorrow.
