SCHOOL: KINA HIGH SCHOOL, WOJI, PORT HARCOURT

CLASS: JSS 3

AGE: 13

IF I WOULD INVENT SOMETHING NEW

If I had a chance to invent something new which would be beneficial for mankind, it will be a TELEPORTATION DEVICE.

Teleportation is one of the most interesting and fascinating concepts that has captured the imagination of mankind for ages. With advances in technology and science, teleportation may become a reality sooner than we think. I would love to have the ability to teleport, and in this essay, I would give my reasons.

Firstly, with my teleportation device, teleportation will save time and money.

Imagine being able to teleport to your favorite vacation spot within seconds instead of waiting in traffic or airport queues for hours. It would revolutionize the way we travel, and it would be a game-changer for those who are always on the move. Being able to move from one place to another without stress would be fantastic and may allow us to be more productive.

Secondly, why I would want to teleport is for convenience. With the ability to teleport, going to work, running errands and other activities would be a breeze and stress free.

People could live far away from work without worrying about the daily commute or movement. With this option, people could buy homes in cheaper areas, and distance would not be concern for them. Teleporting would allow for more leisure time as distances between activities or events would no longer be a factor. This would improve the quality of life tremendously.

Thirdly, teleportation would reduce the environmental impact of travel. The burning of fossil fuels to power vehicles and aircraft leads to damage to the environment by releasing harmful greenhouse gases into the atmosphere. Teleporting would reduce the carbon footprint of transportation, which would promote Sustainable and environmentally friendly travel. This would be great news for the planet and its inhabitants.

Lastly, teleportation would eradicate the risk of accidents and fatalities due to transportation. Road accidents are among the leading cause of death globally. Eliminating the need for cars, air craft or other transport means, would reduce the number of accidents, injuries and fatalities. Teleportation would be a much safer alternative to traditional methods of transportation.

In conclusion, there are many advantages to teleportation that would make it an incredible feat. It would save time, increase convenience, be eco-friendly, and safer than traditional modes of transport.

While teleportation is still in the realms of imagination and science fiction, it is a fascinating concept that inspires us to think of what the future might hold. I can only feel optimistic about how it would affect our everyday life and make it more efficient, enjoyable and safer for everyone.

Thank you.
