

## **TOPIC: IF I COULD INVENT A NEW THING**

**NAME: OJEWUSI OKIKIOLA**

**CLASS: JSS3 SILVER**

If I had a chance to invent something new, that would be very beneficial for mankind, it would be a flying car. In the past, people travelled only on horse, or just on foot. After car was invented, it changed everything radically. People started to use car more than any other vehicles.

Nowadays, cars are the most common means of transportation, the number of traffic jam has increased with the use of a great number of cars.

Basically, that is why I would like to invent a flying car.

Firstly, my invention will help to decrease drivers' stress caused by traffic jam. As statistics show of traffic jam are increasing in big cities, as well as small ones, especially during business hours when everyone is in a hurry to get to their work place and unexpectedly encounter massive traffic jam. Some people will prefer to drive flying car instead of ordinary cars. The combination of ordinary and flying cars definitely would help to get rid of traffic jam.

Secondly, in result of this invention, there could be decrease of car accidents. Sometime, people don't realize that they violate the laws and break the rules of traffic, because of a lot of reasons. They violate the law because they are in hurry, they are trying to overcome different traffic problems, like road construction, narrow street, crowd of people etc.

In my own opinion, there is only one solution to these problems, flying cars service should be available.

Thirdly, it would be fun. We have often met the concept of flying cars in science fiction or Hollywood film. Obviously, it is interesting and people would want to try it themselves, I would like to change this stressful atmosphere. Actually, people waste time in traffic jam, instead of that, they can spend much time with their family or friends. This invention will be very beneficial for people to avoid stress and enjoy travelling.

What will make a car to fly?

In the air, a flying car will typically obtain forward thrust from one or more propellers or ducted fans.

A few have a powered helicopter rotor, jet engine are not used due to the ground hazard posed by the hot, high velocity exhaust stream.

Flying cars are designed to alleviate traffic congestion, the futuristic flying cars are the backbone of an efficient mode of transportation. It is believed that such vehicle would change the transportation hassle in densely populated cities and towns.

Finally, I would like to invent a new car to prevent road accident, traffic jams and improved travelling.
