

NAME: VICTOR ENEGIDE

SCHOOL: CHRIST COLLEGE

CLASS: JSS2A

TOPIC: "IF I COULD INVENT SOMETHING NEW"

My name is Victor Enegide, I am twelve years old, I am from Delta state. I live in Lagos state. I attend Christ College Day school. If I could invent something new, I would want to invent a Smoke Converter.

I was inspired through all the smoke which comes from car exhaust which could cause overheating and put your engine at a serious risk of damage. It can cause health hazards especially for people with asthma. The smoke converter consists of a container which stores the smoke and then expose it to heat and oxygen with the use of hardwood to drop down the moisture to it.

Some of the disadvantages of smoke from car exhaust are it reduces car efficiency, it could make people with asthma have a hard time to breath, exhaust leaks and air pollution.

It can reduce car efficiency by reducing airflow in your engine and making the combustion process less efficient, lowering your engine power efficiency. It affects the engine performance by optimizing gas flow and reducing back pressure.

It can cause exhaust leak through improper air to fuel ratio which can cause the engine to run less efficiently, causing it to reduce overall engine efficiency. It can affect people with asthma by worsening respiratory disease.

It can cause air pollution when car exhaust interacts with air in the presence of sunlight. It can cause harm to our airways and decrease the lung capability. When fuel burns, nitrogen and oxygen react with each other and form nitrogen oxides. The effects of smoke from car exhaust are dizziness, weakness, headache, vomiting and loss of consciousness.

Some of the advantages of smoke converter is that it reduces air pollution, it ensures a smoke free environment, it makes us have better blood circulation and your immune system will improve.

It prevents air pollution which means they're less chances of decreased lungs etc. It ensures a smoke free environment which means there is absence of smoke which influences the environment positively. It makes us have better blood circulation which help us to heal wounds faster, it keeps your brain sharp and keeps your heart healthy.

The last one is it helps you have an improved immune system which less down time and overall fatigue. It also protects your body from harmful substances, germs and all changes that could make you ill.

But you can also use the smoke converter for generators, cigarettes, car exhaust etc. It can come in different sizes depending on what they are using it for. The second section of the machine is that once you've off your car the liquid is poured into a pot then boil it which makes it drinking water.

If I could invent a Smoke converter, it will influence the society positively like, absence of smoke, air pollution and it help us to have better blood circulation, improved immune system.
