

If | Could Invent Something New *

Imagine a world that has a cure for cancer, imagine a world where no people are dying of cancer, just imagine a world like that. If | could invent something new definitely it would be a drug for curing cancer completely. Let me start with what is cancer. Cancer is a disease in which the abnormal cells divide uncontrollably and destroy body tissue. It has a lot of causes some of which are: alcohol, smoking and parasites. We have different types of cancer some of which are: carcinoma, sarcoma, melanoma, lymphoma, leukemia etc. Though many scientists have tried to invent a drug that cures cancer completely but none has succeeded, but with my invention cancer will be cured completely. Below are the reasons that brought up my invention.

Firstly, people are dying from cancer all over the world though it is treated but could come back many years later .

Also, the invention will stop worrying those that are trying to invent a cure for cancer completely.

In addition, the disease has caused a lot of problems for the world which is bad.

Hence, saving many people from cancer was also part of the reasons that brought up my invention.

In conclusion, countries have been facing a lot of problems due to cancer e.g Australia who had at least 468.0 cancer rate. Another country is New Zealand who had 438.1 cancer rate

The invention is essential during this lifetime and my reasons why we need the drug are as follows:

Firstly, the invention will help in the world's downgrading population as the world is losing a lot of people due to cancer, also the disease is among the leading causes of death worldwide. In 2022, there was an estimated 20 million new cancer cases and 9.7 million deaths.

In addition, inventing a drug that cures cancer completely will make the world a much a better place.

Therefore, it will make the person live a normal life span as some people who has been infected of the disease could die of thinking.

Moreover, with the help of my invention it will be easy for doctors who have been trying to invent a drug that cures cancer.

In conclusion, the invention will make the world a better place to live in.
