CLASS: JS1

IF I COULD INVENT SOMETHING NEW

If you ask me what I would like to invent, I'd say I will like to invent an anywhere door. It can easily be used to travel to places within a second.

It will be a door with a frame in the form of gadget which is used to travel from one place to another in seconds just by thinking about the place you would love to go. You think of a place where you want to go while opening the door and boom, you arrive at your place.

I love travelling and who doesn't? It's just a matter of money and time. But if the world invents anywhere door, the tourism industry will suffer significantly. I would travel the world without spending a single rupee on transportation. It will save so much time and money. There will be less pollution in the environment due to no vehicles used in travel. It will also help in seeing the world at the comfort of our homes.

Suddenly, I will be under the Eiffel Tower in Paris and in the very next moment, watch the Northern Lights in Alaska and in the next moment basking in the sun in the Bahamas. I would also get to my favourite food place at a particular vendor just by thinking about it.

Apart from being able to see the beautiful world and having my favourite food across the world, anywhere door will also help me to live together with my family in different cities due to work and study commitments. But because of the anywhere door, we would live together in the same house and go to our respective places with the help of the door. It will also save so much time that I spent on the commute on everyday basis which will help me to use that time for doing things I love the most and I don't get time for that in my everyday life. I will also meet my friends and family who live in different parts of the world whenever I miss them.

However, I believe that we have the right to hope because according to the book "Sails in the sky (1938)", people of the 15th Century used to claim Leonardo da Vinci's idea of airplane to be crazy, and now we are absolutely not crazy, but are actually sailing in the sky with airplanes.

I think to have an anywhere door will make my dream come true. I hope science and technology advance so much that one day I can actually own my Anywhere Door. And I don't think that day is far when we will use the anywhere door. And if you don't believe me then, do you think that you will be able to talk to each other every day with a device in your pocket! I know with collaboration, I will be able to invent this gadget.
