

IF I COULD INVENT SOMETHING NEW

I am writing this expository essay to make known to people what I could invent if I was given the opportunity to. Before I start, I would like to make known to everyone the meaning of the title “if I could invent”. If we look closer we may see that there is a question that follows this title and that question is “what would I invent”? I would like to explain further the meaning of invention. Invention can be defined as the process of designing something or bringing into existence a new idea.

If I was asked, “What would I like to invent” I would look closer to the country’s problem and see what I can invent to help solve it. Some of the crucial issues in Nigeria are currency depreciation, corruption, cyber security, electricity and lack of fuel, with possible solutions are highlighted below.

Currency depreciation, this is a crucial problem in Nigeria. As at today 1st July 2024 (~~₦~~1528.63) makes \$1 and because of that, things appears more costly which leads to high cost of living. As Naira depreciate, it causes increased price of commodities in the country. I wish to invent the idea that if we indulge in more export and import trade to gain more foreign currency in our banks, that will help reduce the cost of several commodities.

Secondly, corruption, our country has really indulge in corruption and it is known greatly for being a corrupt if not the most corrupt country. In our government sector we have corruption rising from money laundering, embezzlements of fund to rigging of election. It is also found in academic sector with our students in the cause of examination malpractice, students bribing the teachers and some of the lecturers raping their female students. To eradicate this anomaly is to enforce a new constitution guarding against corruption with no exemption, no matter the persons position.

I would like to propose an already existing system called cyber security, where all banks have CCTV cameras and even more securities in our banks, I could suggest the security tactics used in the movie “MONEY HEIST” should be enforced, with high intellect of such nature, it could really reduce high level of criminality in the country. We also have fraudster called yahoo boys who embezzle people money from both outside and within the country and this are pressing issues in the country.

Electricity and lack of fuel, some part of our country is suffering from power outage, we rarely have electricity and plus the cost of fuel is high. It is a very serious issue, we can make use of our natural resources. Date oil can be used to power vehicles and can be used in place of fuel and that can reduce the use of fuels.

In conclusion, I know and believe that and inventor is one who can improvise with things happening in his immediate environment to solve problems.
