

IF I COULD INVENT SOMETHING NEW

The sense of innovation and invention is captivating and exciting. Innovation and invention is the action of creating something new, it is the act of bringing up ideas that improve the economy and finance of the country. If I had the opportunity to invent something new, I would focus my effort on creating an innovation that could have a significant positive impact on the economy and financial landscape of the country. But my question is” what will I invent?”. As economies are constantly evolving and striving for growth and prosperity, everyone should have the opportunity to lead fulfilling and productive lives. In Nigeria, our main problem is corruption, lack of refineries, bad governance and rigging of election. Inventing ideas like use of water powered car instead of fuel usage, use of date oil to replace fossil fuel can enhance the economy for good.

Consequently, lack of refineries has led to the increase in cost of products, machinery and important items. Referring to the question above “what would I invent”, am not focusing only on one device but am focusing globally on how to make the world a better place for habitation that favour biotic and abiotic factors. Identifying global challenges, as an inventor, my first task would be to identify pressing global challenges that require innovative solution. To confide with you I am paving my way to creating many things that can kick off Nigeria’s economy from grass to grace.

One area that particularly interests me is the field of renewable energy where innovations like urine-power generator are been invented. As we face the growing threat of climate change, the need for sustainable and environmentally-friendly energy sources has never been more urgent, as an inventor I would be passionate about developing new technologies that mitigate the effect of climate change and harness the power of renewable resources like solar, wind mill, hydroelectric power.

Imagine an AI-powered personal finance assistant that could automatically track spending, optimize budget, and provide customized investment recommendation based on an individual financial profile and goals. By understanding the complex issues facing our world, I would be better equipped to develop inventions that has a meaningful and lasting impact.

Ultimately, the true value of any new invention lies in its ability to improve people’s lives and drive positive change. Believe it’s ripe, is the field of personal finance and investing. An invention that could revolutionize the economy and finance of the country is a decentralized and secure digital banking platform with the advent of blockchain technology and cryptocurrencies, there is growing need for a more transparent and efficient system

Moreover, the path of the inventor is not an easy one there will be setbacks and obstacles to overcome, you need creativity, curiosity and determination in the essence of what it means to be an inventor, to create something that didn’t exist before, and to do so in a way that benefit humanity as a whole.
