If I Could Invent Something New

If I had a chance to invent something new which would be very beneficial for mankind, it would be a **FLYING CAR**. In the past, people travelled only on horses or just by foot but everything changed radically after car was invented. People started using cars more than other means of transportation and nowadays, cars are the commonest means of transportation. Traffic congestion is increasing by the day with the use of cars on our roads and this is basically why I would like to invent a flying car. More reasons for my proposed invention are as follow:

Firstly, my invention would help drivers to reduce stress caused by traffic jam. Statistics has shown that traffic jam is increasing in cities and some towns especially during business hours when everyone is in a hurry, trying to get to their work place and most often, they get entangled in massive blockades and get held up in traffic till they end up getting late to their points of contact. Some even miss out on greater business opportunities, job appointments and other related appointments. My invention will surely save people their jobs and business opportunities for they can always fly over any busy traffic region.

Secondly, my invention will surely reduce accident on the road. Many people became accident victims because of the recklessness of motorists and their ignorance to traffic rules, regulations and signs and such happens because they are always in a hurry. My invention will surely forestall this.

Finally, it would be fun to fly in the sky without going through the rigorous process of procuring visa and travelling tickets just like it is done while flying on a plane. One would be saved the stress of going to the airport and queuing to be checked in. We have often encountered the concept of flying cars in science fictions and hollywood movies and obviously, my invention will make it a reality.

I really want to aid mankind, particularly road users. I want to help them reduce stress, create an improved atmosphere, reduce accident, cut down on traffic congestions and help them to beat deadlines to meetings and events of great importance to their lives. We should also not forget that my invention can save lives as flying ambulances would get patients and accident victims who are on emergency to the hospital for quick and immediate treatment.
