An Invention is a unique idea, method, innovation, composition, process or device. While an inventor is a person who created a particular process or device.

If I could invent something new, I would invent an App called “The Accessible Educational Tool”. My invention will be used in helping children who are physically challenged learn and communicate more effectively. My invention will be an amazing innovation that will transform the world for a better tomorrow.

I want to invent this App because every child requires equality in education. According to 2022 UNESCO report on Nigeria, more than 10.5 million children of school age are not in school, this includes both able and physically challenged .You can imagine when able children are not in school let alone the physically challenged. In a society like Nigeria where some people hide their physically challenged children so that they will not go to school to avoid discrimination, it then becomes very necessary for us to find ways to educate these children. These Children who do not have access to education face unique problems like social isolation, stigma, limited understanding of their lives and decreased confidence.

In Addition, data of physically challenged children will be captured. This would be done through public awareness and by partnering with media companies, influencers and running advertisements on television and social media. So by these parents with physically challenged children can register. My app will come with different features like progress tracking, mock test and multilingualism that will offer contents in multiple languages so that it will be more user friendly. But in the meantime some children with disabilities may not have access to smartphones so I would also partner with Tech companies to manufacture phones that will include my app as well as other general phone functions.

Although my App would also need data and they may not have enough money en to buy every time, that is why my App will have one time registration through data. So by this, the child will have access to it offline. Well, before I’ll distribute the phone I will make the phone low cost by partnering between with phone manufacturers and the government. The government can subsidize it or can create funds for people to buy it.

Moreover, my vision is also to invent an App called ‘The Accessible Employment Tool. Through this tool, disabled children can easily get employed after their education.

In Conclusion my device will bring a culture of learning and a greater future. I hope to create a world where every child with disability has the opportunity to attain their full potentials by accessing quality education. We should all keep shining bright and let our passion lead us through providing qualitative education for all children. All disabled children should keep pursuing their dreams for education with my invention .The

Accessible education tool will provide quality and accessible education for disabled children. I am not just creating a tool but creating a movement for inclusive education and equality.
