

Title: If I could invent something new

Name: Nanmak Grace Mamven

School: Canaan High School, Jos.

Class: JSS1

Date: July 1, 2024

Introduction on the need for an invention

A proverb says, "Necessity is the mother of invention." The need for something new usually arises when problems arise, or people are dissatisfied with what is old and unhelpful. When people are tired of the usual status quo or the traditional way of doing things, they want to explore what has yet to be discovered.

Meaning of an invention

Merriam-Webster dictionary defines an invention as a discovery, or any product of the imagination, a device, process, or discovery that is new and useful, reflecting extraordinary creative ability or skill, and making a distinct and recognized contribution to and advancement of science.

The problem

Nigeria has a large youth population, but some young people are unproductive due to the influence of the Internet's inappropriate content. The concern is "corruption of the mind" caused by exposure to lousy content like scams, pornography, and nude images. This can lead to negative behaviors and hinder personal and national development. While the Internet offers benefits, it's crucial to address the issue of inappropriate content affecting young Nigerians.

The need for regulation

In today's world, the Internet is essential for education, banking, and communication. Given its necessity, it's crucial to regulate its use and support the minds of young people who can positively impact society. Therefore, addressing the corruption of young minds is vital, especially in Nigeria, where this issue is common.

The invention

To solve this problem, I would like to invent something unique. I would make a chip called a corruption prevention chip (CPC). It would be part of a space satellite. I would give it to the satellite makers, and they would place it in every satellite—and those to come.

How will the chip be made?

It will be like a standard chip but have a particular sensor. The sensor will detect bad images, videos, and texts sent to monitor online behavior. With the growing field of programming and engineering, experts will be consulted to develop the software and hardware.

How will it work?

The CPC will be available for everyone's use. However, it will be like an extension in a browser that can be downloaded on a device and readily available to detect online behaviors and make suggestions or caution internet users when inappropriate content is detected. Such detection will be shown on the satellite, and the individual concerned can be called to order or punitive measures put in place to deter others.

Conclusion and Moral Implication:

There is a proverb that says, 'Bad company corrupts good character.' When young people occupy their minds with good online content, they will behave well. Hence, there is a need to utilize the CPC as an invention to support their internet use.
