CLASS: JSS 3

SCHOOL: ESTATE JUNIOR GRAMMAR SCHOOL, OKE-ISAGUN

TOPIC: IF I COULD INVENT SOMETHING NEW

Firstly I would like to define the word “Invent”.

The word “Invent” simply means to create or design something that has not being in existence before. It can also mean to produce something, such as a useful device or process for the first time through the use of the imagination of ingenious thinking and experiment.

Invention is what comes from the mind, it the use of our imaginative thinking to produce tools that can make human life easier.

If I could invent something new, it will be something that will make a very great impact in the society. I will invent vehicles that will be powered by water only. These vehicles will make use of water as its fuel instead of fossil fuel like gasoline or natural gas. I will further expatiate in this essay on how this invention will be of great benefit to the society and to the world at large.

As we all know that vehicles also play and important role in our everyday life, this method of transportation as so many benefits, some of which are; making it easier for us to travel from one place to another, providing easier access to remote places, it is used for carry goods, vehicles can also be used to convey humans from their destination even within short period of time, vehicles provide convenient and efficient transportation for individual and goods.

The increase use of vehicle causes harm to our health and bring a lot of damages to the atmosphere. Vehicles contains greenhouse gases that cause climate change which result in atmospheric imbalance. Burning gasoline and diesel fuel creates harmful by-products like nitrogen dioxide, carbon monoxide, hydro carbons. Therefore, there has been an increase in respiratory diseases such as asthma and other health anomalies as well as damage to the natural environment.

If I could be able to invent a water powered vehicle” I strongly believe that there will be reduction of carbon emission in to the atmosphere, thereby reducing the risk of climate change

in the nearest future. The invention will also help in saving our dear planet earth from harmful emissions that deplete the ozone layer, and also our ecosystem will not be endangered. Whereas, the “water powered vehicle” is cheap.

The water powered vehicle will reduce inflation and hardship in the country, because water is cheap, affordable and easy to get. It will reduce respiratory diseases like asthma, angina pectoris, chronic obstructive pulmonary diseases etc.

If I could successfully bring my imagination to reality through this invention I am assured that, the emission of greenhouse gas will be minimized totally.

In summary, if Israel can invent the most powerful defense weapon (IRON DOME) which as tremendously help them to intercept and destroy deadly rockets from their opponents, my water powered vehicle will go a long way In solving part of the problem in my dear country Nigeria.
