

NAME: Okorji Deborah

SCHOOL: Bloombreed High School, Port Harcourt.

CLASS: Year 9

TOPIC: **If I could invent something new**

Imagine an invention that would make the lives of many easier, imagine an invention that would improve the health of many individuals, imagine a game changing device that would simultaneously improve the cleanliness of homes, hotels, or even businesses that would as well ensure clean air to breathe that would equally translate to a pair of healthy lungs.

Introducing the ‘dust magnet,’ an orb looking object with a tiny hole at the top, its function you may be wondering...well, it’s ever so simple.

Take a look at the bigger picture, and imagine a world with minimal dust all because of this prototype. Not only would it add to the aesthetic value of any room by looking like an ordinary perfume bottle or such, but would practically absorb dust of any form into it with little to no stress coming from you.

This micro innovation of mine, as one of its many benefits, can also contribute to the health sector in its own way by providing purified air for civilians with asthma, bronchitis, or any pulmonary condition that worsens with the introduction of dusty air.

Although people with lung conditions have it worse in the long run, frankly speaking we all want a nice, fresh whiff of crystal clear air.

After previously expressing one of the countless benefits of the dust magnet, another extremely advantageous agent of the dust magnet would just have to be the sheer convenience of this development within the business sector by simply providing top-notch sanitary provisions inside areas where people tend to make entry more frequently. For example, a hotel room where customers leave and come back many times in a single day or a general office in an organization where lots and lots of people step in to ensure sanitary cleanliness within the business space.

This does not only apply to frequent locomotion within a room but also applies to little to no movement within a specific space. I am sure we have all experienced owning a shelf or decorative piece that tends to sit in a particular place due to how perfectly placed it seems or we just don’t have reason to move it and this object tends to leave us in awe at the sheer amount of dust that always accumulates in large quantities. Thanks to the dust magnet, our worries are no more. By placing one of these on top or even around the main focus, it always gets the job done.

Ultimately, I am sure everyone must be curious how exactly we care for the dust magnet. Simple really, all that has to be done is to either give it a rinse under a running water source or just throw it out in a trash bin. It is plastic after all, although, I strongly advise the re-use of it just to save your money.

In all, I am confident the dust magnet has the capabilities to get the job done for a cleaner environment for you and me.
