

**NAME: NDUKWU VIRTUE IFECHUKWU**

**SCHOOL: UNIVERSITY DEMONSTRATION SECONDARY SCHOOL,  
UNIVERSITY OF PORT HARCOURT.**

**CLASS: JSS 3D**

### **IF I COULD INVENT SOMETHING NEW**

If I had a chance to invent something new, it would be flying cars.

In the earlier days, people travelled on foot, until cars were produced which typically changed everything. However, the number of cars has increased and has caused a lot of fist and that is why I would like to create flying cars.

Nowadays, almost in every city we observed some problems with traffic. I'm a victim. For instance, in Port Harcourt, you can't miss a hectic traffic jam every morning. We often hear about government official's abuse on other road users with sirens and intimidation. They turn on special signals such as sirens and ignore traffic rules in a bit to avoid heavy traffic.

I think that it would be cheaper to use flying cars that would not require you to change tyres or wait in a repair suspension and others. Again, producing these flying cars with more powerful engines and helical blades like mini-helicopter would reduce risks. Although, creating flying cars might be quite expensive but they have a lot of advantages such as risks reduction.

Moreover, the new flying cars will impact people's life positively and also minimize time waste, high way robberies and assassination. It would reduce accidents and expenditures on construction of roads and bridges. I hope that this project will be executed as soon as possible.
