

## **IF I COULD INVENT SOMETHING NEW**

My name is Ogbanama Ogbanama Ogette, I'm 14 years old, I am dark in complexion, a student of ideal high school, I'm in jss3 class. Ideal high school is located in 48 Ededem street, Calabar South, in cross river state, Nigeria, it's a school with high learning standards, with quality staffs, who model the lives of young learners like me, to meet up with various academic challenges in the society and the world at large. As a young boy I've noticed a lot of things and as such I'll like to say my own little opinion as to what I'll do to make life better for the world, the third world countries are really suffering, poor access to Internet facilities, poor drinking water, no infrastructure and social amenities are lacking thus prompting me to write this essay.

The reason I'm writing this essay is to tell the world my idea on how I wish to change the world with my invention, if I could invent one thing to change the world, I'd invent a device capable of efficiently and sustainably purifying water on a large scale. Access to clean water is a fundamental human right and also part of the sustainable development goals (SDGs) number (6) which is provision of clean water and sanitation, access to clean water is a crucial factor of public health, sanitation, agriculture and economic development. Many parts of the world still lack reliable access to safe drinking water, leading to numerous health challenges and hindering socioeconomic progress. A device that can purify water efficiently and affordably and without causing harm to the environment would have a profound impact on global health, well-being and equality. It could save lives, alleviate poverty and empower communities to thrive. I could invent a simple machine or a chemical-based compound that can convert any type of water like sea water or sewage water to pure drinkable water, cause as humans 80% of the body is comprised of water, so it is important we invent a machine that can make Access to water easy especially in the remote communities and countries of the world that has little or no access to portable water.

Secondly, I will like to invent a device for elderly people that announces to them their schedules to them for example "it's time for your medications" the elderly forget a lot especially those living with dementia, and as such a device that reminds them of their schedules will be good, like small loudspeakers, maybe on the walls of the house that can call out things to them when they are ready. These are my thoughts on how to make the world a better place with my invention.

Thank you for reading my essay.
