Class: JSS 3

IF I COULD INVENT SOMETHING NEW

If I had a chance to invent something new which would be very beneficial for mankind it would be a flying car. In the past, people travelled on horses or on foot. After which car was invented it changed everything totally. People started to use cars more than other vehicles. Nowadays, cars are the most common means of transportation. The number of traffic jams has increased with the great number of cars. Basically, that is why I would like to invent a flying car.

Firstly, my invention would help to reduce drivers stress as a result of traffic jams which are increasing in big cities as well as small ones, especially during business hours when everyone is in a hurry trying to get to their work places and different destinations and unexpectedly encounter traffic jams. Some people would prefer to drive flying cars instead of ordinary cars. The combination of ordinary cars and flying cars would definitely help to get rid of traffic jams.

Secondly, as a result of my invention there could be decrease of car and vehicle accidents. Sometimes people don't realize that they violate the laws because they are in a hurry, also, they are trying to overcome different traffic problems like road construction, narrow streets, crowds of people and so on. In my opinion there is only one solution to these problems. Flying car should also be available.

In addition, I would like to change the stressful atmosphere. Actually, people waste time in traffic jams instead of spending more time with their family and friends or rather work hard to earn salaries or wages that can be used to suit their basic needs.

Furthermore, my invention which is a flying car would make people get to their destination on time without any form of delay or accident. Most people don't like keeping late night, in the occurrence of not arriving to their destination on time. So my invention would help to lessen the situation.

Moreover, we know how expensive it is for our Government to build good roads. We spend years constructing roads. Most of our roads has pot holes and it causes harm to vehicles being driven on the road. It also causes different complications in the vehicle which leads to excessive spending of money to repair the vehicles which flying cars cannot encounter such problem.

Equally important, beyond the use of cars in our everyday life and also the fact that the increase in use of cars has resulted in the increase of different kinds of pollution. I strongly believe that "flying cars" would be an important innovation to resist due to the fact that air is a free gift from God. It would also be an important investment for our life.

To sum it up, I strongly hope that my invention would be a turning point in the way we see transportation, this will bring a lot of benefit to our society such as the reduction in the cost of market products and also encourage cheaper means to travel from one place to another.
