CLASS: JSS2

IF I COULD INVENT SOMETHING NEW

All my life I have always wanted to invent new things, things that change the world and not destroy the world, things I would be known for, things that would make human life a comfortable one. Isn't it fantastic how the world changed from using candle to LED lights? Around us today are so many inventions and much more to create so many inventions that could alter humanity and make life not only fun but interesting and extremely easy. Wise words say one can only be limited by one's mind, so, I dare to think beyond human possibilities. To wonder if I could invent something new is like finding a needle in a hay stack its full of bountiful possibilities here are some ideologies of what I would create.

To begin with, if I could invent something new, it would be a mind scanning machine. It is a tool that scans the actions, thoughts, feelings, assumptions and other things that has to do with the mind. Imagine being able to identify the intentions of someone you just met, it not only prevents you from making mistakes but it gives you clarity and peace towards social interaction with people. Possibilities of defrauding people would be reduced to the barest minimum. People would not fall victims of circumstances just because they cannot read what is in a man's heart. With a mind scanner, cheating in marriage will stop, election fraud will end, advanced free fraud, popularly known as 419 will be a thing of the past. Once you project the camera on any individual, then you could see all his hidden intentions and make necessary moves before it becomes too late.

In addition, a teleportation machine is perhaps another invention which I am interested in.. Teleportation is a kind of traveling route that looks like magic. One can travel from Lagos to Dubai in a split second. You just press a button and you disappear in split second only to appear in your next destination in just a second. It will not only facilitate transportation and tourism but also enhance cultural development. For instance, due to the high rate of kidnapping and human trafficking in Nigeria, teleportation machine will help those menace. Also, with the economy of Nigeria today where people risk their lives in order to buy food, talk more of buying petrol, there will be no need of buying fuel when there is a machine that you can click on the button and it will take you to your destinations within few seconds. It can also serve as a faster means of transportation for those that have urgent places to attend or would want to travel outside the country.

Finally, I would like to invent this machine because it would help me and my nation to be one of the best countries where corruption is reduced, advancement in politics, and things that could make human existence fun and interesting.
