

## **IF I COULD INVENT SOMETHING NEW**

Many children around the world wished they could invent something of their own. However, do they possess the necessary courage, confidence, and support to pursue this dream? I firmly believe it's within their reach, achievable through determination and focused effort.

To invent means to produce something that has not existed before. A person who invents something is said to be an inventor and I would love to be one of them.

I wish I could invent "Rocket Boots" that would allow people to soar high into the sky. In the future, I aspire to become an Aeronautical Engineer. By combining the knowledge gained from my future studies and what I have already learned, I am confident that I can create a successful and innovative outcome with my invention.

Phillipians 4:13 according to the Revised Standard Version, it reads "I can do all things in him who strengthens me". Truly this Bible verse is an inspiration to me. Why can't we all try our best and put our faith in Jesus to help us? I believe it is possible for "With God all things are possible".

However, I got inspired about this invention and thought more of it after watching CNN commercials. One particular ad caught my attention - it featured young kids aspiring to invent something unique. This resonated deeply with me, and "Rocket Boots" immediately came to mind, especially since they align with my future course of study. I envisioned the potential impact of my invention, not only in terms of financial gain but also in making my parents and my country, Nigeria, proud. I imagined its global reach and even pictured myself being interviewed by CNN, a dream I have always cherished. I am grateful to CNN for their engaging sessions on television, which have fueled my courage and determination.

I came across several intriguing facts in my sister's graduation yearbook. Among them, two stood out: "The most enviable seven-letter word, achieve it SUCCESS," and "The most essential ten-letter word, maintain it CONFIDENCE." To invent these rocket boots, I must have confidence in myself for the endeavour to succeed.

Before commencing the invention process, I would carefully consider the challenges and benefits it would offer to individuals and society. Ensuring it poses no harm, rigorous testing would precede its deployment. Operation would be facilitated via a remote control, managing initiation, movement control, and halting of the device.

In conclusion, the prospect of inventing something entirely new is both exciting and challenging. As we stand on the threshold of innovation, fueled by imagination and determination, we must remember that every great invention started as a simple idea. Whether it's improving daily life, solving global challenges, or inspiring future

generations, the power to innovate lies within each of us. Let us embrace this potential, for the future belongs to those who dare to dream and create.
