Essay: If I Could Invent Something.

Number of words: Not more than 500 words

If I Could Invent Something

Invention, the creation of a new solution or concept that brings about significant change, has been a driving force behind human progress for thousands of years.

To invent something means to think out of the box and make something new.

Inventions makes things easy and also prevent loss of lives. If I could invent something, it will be a cure for cancer, I know that scientists have been researching and experimenting on a cure but they found nothing. Cancer is a disease that happens when abnormal cells develop, divide, and destroy health tissues in the body. It has been said that cancer has caused a lot of damages to human's lives, but only few people had been able to manage it through the use of chemotherapy.

Chemotherapy is a drug treatment that uses powerful chemicals to kill fast growing cells in the body.

From what I learnt, chemotherapy is a treatment for cancer, but it is not a permanent cure for cancer. Although it tends to destroy rapidly growing cancerous cells in the body. There are different types of cancer which are: Breast cancer, lung cancer, colon cancer, ovarian cancer, prostate cancer, cancer of the pancreas and so on

I wish I could invent a permanent cure for cancer because my grandmother whom I love so much died of cancer of the pancreas. Pancreatic cancer is a type of cancer that begins as a growth of cells in the pancreas. The pancreas lies behind the lower part of the stomach. It makes enzymes that help digest food and hormones that help manage blood sugar.

If there had been a permanent cure for cancer she might still be living by now. At the moment there is no permanent cure. I got the understanding that cancer might never be able to cure completely but scientists are optimistic that vaccines, personalized medicine and smart lifestyle choices will help prevent and treat much greater proportion of cases of cancer. One of the reasons I aspire to become a scientist is to help in researching more on the causes, symptoms, and permanent cure of this deadly disease which is not a respecter of the poor, rich, young and old.

Thank you.
