

Name: Kasali Ahmad Adegbeniga.

School: Read and Lead International School.

Class: JSS 2.

If I could invent something new.

An invention is an object that has never existed before it was invented. An inventor can also be called an engineer but sometimes, you may not necessarily have to be an engineer to invent something. To be an inventor, one has to be creative with at least some level of education. The knowledge of science and creativity is what helps inventors become who they are.

If I could invent something new, it would be something that would change Nigeria and the whole world the way former inventions like cars and aeroplanes change our lives and made life easier. If I could invent something new, I would show the world that Nigeria has a lot of potential to offer to the world. To be an inventor, one has to be able to think wide and far beyond an average person's expectations. You would also have to imagine how it would be helpful in the present and future.

If I could invent something new, I would invent an automatic house. It would be like a normal house but it would be computerised instead. The house would have an advanced security system that no one can break into. It would not use password or secret codes, instead it would make use of retina scans of everyone living in the house. The security system would only allow a person to enter the house after verifying the retina scan from its database. The house itself would be fully armed as it is a robot itself. The robot would be capable of doing everything in the house including chores. This type of house would be excellent to live an easy life and be perfect for the aged and people living with disabilities. Also, the house would fulfil my childhood fantasy of seeing a house move as it would be able to move and change locations when powered with high power machines. The house would also be able to move to another continent when humans start moving there. Designing and building an automatic house would take a lot of time and also require a large crew that would include engineers, scientists and other professionals.

A real inventor does not give up even after he fails multiple times. He keeps trying till the invention is successful because a successful outcome is worth all the attempts. I hope to become an inventor whose inventions would make the world a better place.
