

Name: IDRIS HALIYAH

School: FAD MAESTRO ACADEMY

Class: JSS 1

If I could invent something new, I would invent a dream recorder

Firstly, a dream is a series of image and sensations that occurs in a person's mind during sleep. In some cases, some people might not remember their dreams, and the process of trying to remember it can affect their mental Status. Unknown to a number of people, our dreams may be the gateway to our destiny. Many of our spiritual battles are fought in the dream and many are known to have lost their destinies in this same process. To assist people to remember and not neglect their meaningful dreams, If I could invent something new, I will Invent a dream recorder that will be used to record our dreams.

This machine will be the combination of

3D visualization and AI (Artificial Intelligence) element to produce a visual record that would be close to the experiences reflected in the dream.

Furthermore, this machine can help people in the following ways: to understand oneself, to solve spiritual, Physical and So many other problems. It will help people to recognize and process their emotions, Increase personal insight. It can help one to develop the skills of interpreting dreams. It can also help people in coma to develop the sense of where they were during that period.

Many people are known to have had great and productive ideas while sleeping, such great ideas could lead to great inventions that will aid and develop the society, only to wake up and not remember it. This machine will be sure to capture moments/dreams like this which can be replayed and seen in a realistic way. This will not only help the person who dreamt, but would help the society to develop through such ideas and inventions as well
