CLASS: JSS 2

SCHOOL: BAPTIST GIRLS' ACADEMY OBANIKORO LAGOS..

TOPIC: IF I COULD INVENT SOMETHING.

IF I COULD INVENT SOMETHING

To start with I would like to invent a flying car powered by solar panels or compressed natural gas or hydrogen that would ease people from stress. A flying car is a car that can fly in the air. It can fly on its own and does not need assistance of a driver. It will be flying in the air and you will be relaxing which will be fun, stress free and interesting. However the flying car will have regulatory support from a regulatory agency or government agency as required.

However, a flying car can get to anywhere easier and faster. It has its own bad side and good side. As it has its own advantages and disadvantages. One major advantage is that it saves time. Time is one of the most important factors in life. Time is priceless and when it is passed, it cannot be retrieved back. Time management is very important. You have to be tracking time and that is what flying car helps you to do and it saves your time even if you are running late to school or work, you can count on it. It also helps to ease stress. Flying car helps to reduce stress, tension and fatigue especially when you are tired and worn out. It will eradicate traffic; reduce environmental pollution and noise pollution. In case of medical emergencies, flying car will help get patient faster to the hospital or medical facilities.

Furthermore, flying car helps to reduce noise pollution from communities, factories, trucks, cars that produce smoke. It helps to reduce traffic and regulate breakdown on the highways which helps to save time. Traffic light can be an obstruction and can cause traffic which makes people to be worn out in hours of traffic. It might also lead to transfer of aggression from one driver to another. Flying car makes you escape traffic and have a free clear air. All of these are enough to have a flying car. Of course it saves time but it is very expensive and costly and some people might not be able to afford it but will like to have it. The materials and equipment are very costly which makes it very expensive. There are fewer safety measures especially when flying in the air. You can predict what is happening in the air through the regulatory sky. This is also one of the

advantages of a flying car because it can reduce the loss life, and improve time management and promote effectiveness of individuals at any point in time.

In conclusion having a flying cars in Nigeria especially in Lagos, it will safe us time wasted due to bad road, flooding on the road as a result of heavy downpour and clog drainages and traffic due to many cars on the road.

Thank you
