

## If I Am to Invent Something New

Creation, Establishment, Formation. Earth; the planet where humanity has evolved and thrived, our Earth has had many noticeable differences within the past 4.54 billion years, we've had innovative, creative, entrepreneurs develop and come out with ideas, not just ordinary ideas, ideas which has drastically contributed to the establishment of Earth. Creations like that have improved our everyday life, reducing the use of an exorbitant amount of effort in our lives. Although this development is encouraged, it doesn't stop there, there are so many things wrong with our current society, how can we fix that?, what can we do to help, or do we even care? These are very valid questions, are we really practicing what we preach? or is it just for a couple hundred of dollars.

We all claim to care and take interest in the establishment and evolution of our planet Earth, but the reality is; we are blinded by our selfish, greedy, money-chasing alter-egos. Most times, us humans, refuse to realize and grasp how much our Earth still needs to develop and mature, even after being in evolution for 4.6 billion years, being that Earth's biggest problems are the things we contribute to like; climate change, degradation, pollution etc.

Aside from the physical features of earth, we should think of the not-so physical problems which occurs daily, racism, gender inequality, poverty, lack of education are all complications which take place within our society.

We consistently fail to comprehend how many things need to change, we need to come out from under the light, open our eyes and realize that being on your bed all day long scrolling mindlessly does not, will not, and won't ever help contribute to the development of something that'll change humanity.

If I am to Invent Something New, where do I start, as we have so many unsolved problems, how about something, anything that'll put an end to the language barrier between different races. We are separated, not by choice, from one another because of the way we speak, Communication is a key factor to team work and problem solving so I would Invent something that breaks the barrier between a South-Asian person and a South African person, decoding the language between them effortlessly.

If I am to Invent Something New, I would fabricate and manufacture a way to terminate the never ending racial prejudice and profiling us men and women of color go through, not just the Africans, the Asians, Hispanics, and other refugees, migrants and other races.

Lastly, I would invent something that would allow the less privilege's to have a chance,

an opportunity to pursue their dreams, education is the transmission of knowledge and skills and other various forms of character traits, we all entitled of a standard education that will boost our potential in different scopes of career paths.

Albert Einstein once said "Imagination is more important than knowledge. Knowledge is limited. Imagination encircles the world."

Name: Oluwateniola Adesanya

School: Corona Day Secondary School Lekki

Class: Year 8 Green
