

## **EASY WRITING: IF I COULD INVENT SOMETHING**

Invention is the act of bring out or creating out something new or tangible neither to develop a country. If I could invent something new what could that be? So many of our inventors has create out something new that is till ruling the counting or Benefiting our country, like air plane, aircraft, rocket, and soon, but it is not what I want to emphasis on.

I would like to bring out a technology that will brighten pupil's knowledge and make them up and doing. So many of our student or pupils has been dull in education or no longer have interest in it. This technology will make them have interest on it or desire for it.

### **MAIN ARTICLE**

So many of our pupil or student, are school dropout, some are graduate but have no Job, this is because they do not have the knowledge of education, some of our student, does not know the reason why they come to school, some come to school to crack jokes, jests, and go home not knowing that education is paramount this technology will help brightens their mind, and make them know the need of education.

### **TIPS**

This technology will benefit our country in a big way, by it there will be no school prop out, there will be jobs for graduates and also make them academically wise, it will also make them have interest, feelings for education. It will also brighten them and help them become stars. Some of this kidnappers, arm robbers we see, it is not their work neither their career, it is because, they lack advise, and knowledge to follow that which will brighten their life, by this technology, it will help them not to look at their financial problem they are facing like, lack of money: some of this student does not have money, to finish their studies, some of them end up to been a drop out. Another one is, lack of parental care: some of them, their parent doesn't have the time to check their result or degree of his/her child results to know whether the child is upgrading in her academic or not, and also to help in their assignment, by this nonchalant act of yours, that child/ward is lacking behind in academies wise, so this technology will help to show our student not only them also our parent the need of education, sorry write this, some our parent does not know need the of education, some only send them to school, so that people will see that he is in school, while some don't care. Remember an adage says education is the keys to success, when a parent does not send his/her child to school, how will that child succeed everyone on this planet need education.
