**If I could Invent something new**  
**Teleportation Machine**

**If I could invent something new it will be a teleportation machine. In Nigeria cars are expensive and transportation is difficult to pay even though Nigeria have created bolt, uber and in drive. Mostly for transportation but it will still cost a large amount of money. But with my creation which is the teleportation machine can transfer anything like bags, cars, luggage's, laptop, phones, lunch box and document, even humans etc to any where in the world in a matter of seconds.**

**It can really change our society infact, it can change the whole country. To buy the machine costs like 50,000#(naira) only it can also save a huge amount money like paying 10,000,000# to travel to another country. And rather than using a whole lot of materials to build an aeroplane we can use it and build the machine we can use the machine to travel around the world for pleasure or visit our family members in another country and the most exciting thing is that is free and does not waste time the only thing you need to power the machine is electricity.**

**To set it up you'll need to buy the teleportation machine then keep it in a big room then plug it to a socket on the wall .Do this same method in the other place you want to teleport to .This machine works by disintegrating the human atoms the placing it back in another place ,Hence teleportation. You can now teleport to where you want you can also put this in your office place or your family house and it is completely safe to use.**
